Packaging Engineers, Inc.

Our EDL's Forming Shoe Roll Wrapper will provide a package that will protect your product, maintain its integrity, and stand up under shipping and handling. These EDL systems are built from the ground up for heavy duty and harsh industrial products – NOT modified consumer product systems!

- Can accommodate rolls up to 20,000lbs+
- Saves on energy – snug fit of film around roll results in less heat used in Shrink Tunnel to complete package
- Big savings on film usage – less film is required versus side seal systems – saving you \$\$\$!
- Flexibility to run random lengths – quick change forming shoe for varying diameters
- Full range of Material Handling and ancillary systems – labelers, check-weighers, reject modules – can be fully integrated for single source turnkey responsibility

Contact Deanna Novak at (920) 336-7744 or deanna.n@edlpackaging.com today to learn more about our money saving solutions!
