

“EDL provides technologies and engineering to configure systems that meet special and often unique customer requirements. We listen, study, design and deliver value.”

EDL's Tray Former / Loader System

Last month, EDL started up a new integrated wrapping system for a customer that produces bricks of vacuum packed coffee. The system consists of a Product Collator, Tray Former/Loader, and Side Feed Automatic Shrink Bundler.

The integrated system was purchased to replace equipment from other OEMs that was not performing well. A second EDL Tray Former/Loader and Shrink Bundler has also been purchased for start up later this summer to replace an older EDL system that has been in operation for over 20 years.

These systems operate by automatically accepting product in a single stream from the Vacuum Packer and collating it into 3 x 4 or 4 x 6 packs of bricks with a pneumatic pusher. A tray is formed from a blank by the tray former, and the collation is loaded into it. The loaded tray transfers to the infeed of the wrapper and is pushed 90° by a pneumatic transfer unit through the web of LDPE film and across the seal jaw. The seal jaw closes, creating a sleeve of film around the pack. The sleeved pack is conveyed through the shrink tunnel hood where the film is shrunk tightly around the pack to form a bull's eye enclosure. These systems operate at 80 bricks per minute. They have a significantly smaller footprint, and use less energy than the systems they are replacing.

EDL also offers turnkey system design, supply, and integration from the standpoint of a 'total solution' approach.

Contact your Area Sales Manager for further information or go to our website to view the video of this system in action.

Why EDL?

EDL has over 40 years of experience designing and manufacturing shrink bundling machinery. The expertise gained and the technology developed over the years has helped us become an industry leader in innovative packaging solutions.

Bring us your application and let us apply our Innovative Solutions! Remember we listen, study, design and deliver value to our customers!

The video for this system mentioned above and many others can be viewed via the "Login" section of the EDL website at www.edlpackaging.com. Login is: edlpackaging and the password is: clients. Please contact your EDL Area Sales Manager for further information.

EDL's Standard Equipment

In addition to being known for delivering "special and often unique" packaging solutions, EDL also supplies a line of standard equipment. Our pre-engineered products include inline, side feed, and semi-automatic systems that can be readily applied to meet and exceed the needs of more common applications. Competitive pricing and short delivery lead times are available on all EDL standard equipment.

This month we are featuring our High Speed Continuous Motion Inline Wrapping System.

New Model: CMILA 22-12 with ST 22-6-78

- Will wrap packs requiring up to 22" film width, 18" product width, and up to 24" length and up to 10" high
- Speed of up to 40 packs per minute
- Machine footprint size of 50" W x 241" L
- Standard electrical supply of 460 volts, 3 phase, 60 HZ, 60 Amps per phase
- GREAT LOW PRICE with IMMEDIATE DELIVERY!

COST: \$86,600

Give our standard equipment line a try. Learn more about our standard equipment at www.edlpackaging.com/edlproducts.html, and then select Bagged, Trayed, or Trayless products. Contact your EDL Area Sales Manager for further information.

EDL SALES TEAM

Ken Carter, President

Area Sales Manager – West
Office: (920) 338-1842 ext. 105
Fax: (920) 336-8585
