

“EDL provides technologies and engineering to configure systems that meet special and often unique customer requirements. We listen, study, design, and deliver value.”

EDL's Inline Automatic Compression Wrapping System

EDL has developed a new Compression Wrapping System for a customer to compress foam parts. The system takes the foam parts and wraps them in a compressed state. The application can accommodate a large size range of products without changeover.

This system operates by manually loading stacks of foam parts onto the Infeed Conveyor. The foam parts are advanced to the Centering/Measuring Conveyor where they are centered and measured. Next, the parts are advanced onto the sealer Infeed/ Top Compression Conveyor. The pack in its relaxed state is compressed and compression is maintained while being fed through the web of film, across the seal jaw, and into the seal position. The product is advanced to the side seal position. Compression is maintained as the side seal jaw lowers and seals the top and bottom layers of film together. The pack is then advanced onto the second side seal position. Compression is released as the pack is advanced onto the Exit Conveyor.

The product packaged in this case is foam parts, however, there are many other products that can use this approach. Contact you Area Sales Manager for further information or to discuss where an “EDL Inline Automatic Compression System” maybe appropriate.

Features and Benefits of the Inline Automatic Compression Wrapping System:

- *Process up to 5 packs per minute*
- *Material cost reduction*
- *Shipping volume cost reduction*
- *Labor reduction potential*
- *Automated System*

Why EDL?

EDL has over 40 years of experience designing and manufacturing shrink bundling machinery. The expertise gained and the technology developed over the years has helped us become an industry leader in innovative packaging solutions.

Bring us your application and let us apply our Innovative Solutions! Remember: We listen, study, design, and deliver value to our customers!

The video for this system mentioned above and many others can be viewed via the "Login" section of the EDL website at www.edlpackaging.com. *Login:* edlpackaging *Password:* clients. Please contact your EDL Area Sales Manager for further information.

EDL's Standard Equipment

In addition to being known for delivering "special and often unique" packaging solutions, EDL also supplies a line of standard equipment. Our pre-engineered products include inline, side feed, and semi-automatic systems that can be readily applied to meet and exceed the needs of more common applications. Competitive pricing and short delivery lead times are available on all EDL standard equipment.

This month we are also featuring our EDL Side Feed Automatic 53-12 and Shrink Tunnel System.

Model: SFA 53-12 with ST 53-12-60

- Will wrap packs requiring up to 53" film width, 40" product width, up to 24" length and up to 12" high, can be modified to run larger products.
- Speed of up to 8 packs per minute (dependent on pack size)
- Standard electrical supply of 460 volts, 3 phase, 60 HZ, 60 Amps per phase
- QUICK DELIVERY!

COST: \$ 79,000

Give our standard equipment line a try. Learn more about our standard equipment at www.edlpackaging.com/edlproducts.html, and then select Bagged, Trayed, or Trayless products. Contact your EDL Area Sales Manager for further information.

A Note From Deanna:

We have updated our Project Information Form for 2009. Please obtain your copy from your EDL Area Sales Manager. Completing the new form will ensure quicker turn-around of your project quotes. All the best for a fantastic sales year!
