Packaging Engineers, Inc.

EDL Packaging Features and Benefits!

Following our tradition of constant innovation, EDL introduces the “Protecta Pack Hibrid” system which combines Bundling and Stretch technology. This system applies a sleeve of poly foam, bubble film, LPDE or high abuse film to protect the top, bottom, leading and trailing faces of your package.

The Hibrid system operates on various product sizes at random and tensions the flexible material to the shape and size of your product.

***Provide Your Customers with the Quality
they Expect and Make Money in the Process!***

Contact Deanna Novak at (920) 336-7744 or deanna.n@edlpackaging.com today to learn more about our money saving solutions!
