

EDL's Cost Effective Solution for Bagged Products

EDL's signature Double Tight Wrap technology will be on display at Pack Expo International 2008 in our booth S-2278. The DTW system featured in Chicago will be configured for bundling bagged products such as Sugar, Flour, Rice, or Cat Litter. This type of wrapper can also be built to accommodate a wide variety of different primary package types including cartons, jugs and flexible containers.

Double Tight Wrapping produces brick like bundles while using as much as **45% less film and less energy** than traditional shrink bundling methods. Tightness is achieved by introducing controlled mechanical tension to the film web as it totally encloses bundles in two layers of low density polyethylene film. Double film coverage around the corners/edges and tops/bottoms allows lighter film gauges to be run. A low energy heat tunnel requires minimal heat to fuse the two layers of film together, and is acceptable for products that are heat sensitive such as plastic bags, frozen products and sensitive pharmaceuticals.

The Double Tight Wrap System is an example of EDL's unique and innovative approach to meet our customer's needs. It is offered in both cost effective pre-engineered versions, and can be customized to suit your specific application. **We listen, study, design, and deliver value!**

We look forward to seeing you in Chicago!
