

EDL's Wrapping Solution for Random Size Panel Products

The EDL Panel Pack System will be on display at Pack Expo International 2008 in our booth S-2278. This system is specifically designed for panel-shaped products in a make-to-order environment. The System featured in Chicago can wrap a wide variety of products – windows, office partitions, fence panels, furniture, and any other type of flat product. Sizes can range from 12” to 72” in width and 15” to 108” in length and be fed at random with no set up or changeover required!

A product centering device automatically adjusts for the panel size, centers the product on the machine and takes a precise measurement to be used on the side sealers. The transfer conveyor indexes the product to the continuous

motion hot air side seal and trim units which will adjust to suit the particular size being wrapped in that machine cycle. The sides of the pack are sealed and excess film is trimmed prior to the Shrink Tunnel, thereby creating a total enclosure around the product with consistent appearance regardless of size.

The Panel Pack System is an example of EDL's Innovative approach to meet our customers' needs to produce high quality, ready to ship packages. Bring us your challenge and let us apply our Innovative Solutions. **We listen, study, design, and deliver value!**

We look forward to seeing you in Chicago!
